

How to Use the Advanced Pole Search

Web page: <https://scjpc.net/advanced-pole-search/>

Use this search when pole numbers or locations are partially known.

Search will return a list of all records found in the database, dead or active. Omit space, slash, hyphen, and other special characters.

To search:

1. Select a category from the drop-down list.
2. Type partial pole number and/or location in the respective search boxes. If location is unknown (left blank), you must enter at least 3 characters in the pole number search box.
3. Click Search.
4. Click on column heading to sort the list.
5. Click the unique ID to view the record.

Tips: Users can use the percent symbol (%) as a wildcard to replace missing numbers (e.g., 456%17E) or locations (e.g., LA BREA%FAIRVIEW).

The search will return all records (dead or active records).

If the complete **pole number is known and only the current active record is needed**, use the Quick Pole Search page for faster search performance.
